

T Rotary Cam switch and  
P Switch-disconnector  
Short overview

# Safe switching isolating and control

**EATON**

*Powering Business Worldwide*

We make what matters work.\*

\* At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

# Built in.

## Safe switching, isolating and control with T Rotary Cam Switches and P Switch-disconnectors

The high-performance, robust and compact T Rotary Cam Switches and P Switch-disconnectors are used in machine building, industrial and engineering applications. They provide ultimate safe disconnection and endurance with positive mechanical contact breaking and excellent making & breaking capabilities. Their IP65 degree of protection enables use in harsh environments, and with essential global approvals the T & P range is a perfect switching, isolating and control solution.

The range is available in three basic mounting styles:

- Panel mounting – the switch & handle is fitted on the panel wall or door.
- Rear mounting – fitted at the rear of the panel on DIN rail or by baseplate, with the handle assembly on the door. Suitable for up to 400mm cabinet depth with metal extension shaft.
- Enclosed – mounted in compact, robust polycarbonate enclosures. Available with built-in grounding plate to improve EMC compliance.

P & T switches are available in an extensive range of complete pre-built switch/handle and enclosure combinations ex-stock to suit the specific requirements of our customers. This saves valuable time in the customer's assembly process as well as reducing packaging waste and order administration.

T rotary cam switches are suitable for a wide range of industrial and machine control applications: change-over and step switches, star-delta and reversing switches, etc. Several thousand switching types are available as standard, and customised circuits can also be produced to meet specific customers' needs

## T Rotary Cam Switch

The T rotary switch represents a very flexible, compact and robust modular system. The TM, T0, T3, T5B, T5, T6, T8 rating sizes offer power ratings up to 132 kW, AC-23 A at 400/415 V, 50-60 Hz.

The rated uninterrupted current  $I_u$  ranges from 10 A to 315 A. The high making and breaking capacities and outstanding endurance capabilities makes the T rotary switch suitable for a wide range of switching applications. Customized circuits can also be produced to meet specific customer requirements.

## P Switch-disconnector

The P Switch-disconnectors are available as P1 up to 32 A, P3 up to 100 A, and P5 up to 315 A. These compact and robust manually operated switches provide ultimate safe disconnection with positive mechanical contact breaking and excellent making & breaking capabilities at AC-23A. The P Switch-disconnectors are available with or without the Emergency-Stop function, and are a perfect option for Machine Isolation, Maintenance and Safety switches. Switchable 4<sup>th</sup> pole, and auxiliary contacts can be mounted on the left or right side.

## Main switch with Emergency-stop function<sup>1)</sup>

Process and processing machines require a power disconnecting device conforming to EN 60204-1, emergency stop in an emergency must also be assured. As shown in the textile processing machine, both of these functions are assumed as a P Switch-disconnector.

Emergency stop functions requires:

- Priority function and operation in all operating modes
- The power supply, which could be the source of the danger, must be switched off as quickly as possible

1) The EMERGENCY-STOP devices from Eaton can also be used as EMERGENCY-OFF devices.

## Safety switch with load shedding and signalling

The P & T safety switches P and T are designed as maintenance and manual override switches and safe isolation of the load from the mains power is the primary function. They have clear position indication and are padlockable in the OFF position ensuring safe lock-out during equipment maintenance and repair and ensures the safety of personnel. The enclosures provide ample space for cabling and come with an earth terminal as standard. The switches can also be ordered with 1 normally open / 1 normally closed auxiliary with early break.

P1 = On  
P2 = Off  
Q11 = Load shedding

## Approvals

Eaton's switch disconnectors IEC devices can be used in most countries in the world and North American devices with virtually the same dimensions and the same accessories for the North American market. This considerably simplifies device selection since the North American standard often involve the need for considerably different technical specifications.

Comprehensive product information is available on our website <http://eaton.eu>
